

Company:	ENI
Sector:	Energy / Oil & Gas
Report Year:	2010
Headquarters:	Rome
Standard Application:	GRI G3.1, ISAE3000
Format:	Matrix

### Materiality and stakeholders' engagement

A materiality analysis has been conducted to identify the most relevant Sustainability issues both for the Company and its related stakeholders. The extent to which issues were relevant to the Company (internal significance) was analysed by providing a specific questionnaire to a sample of Eni's managers. The stakeholders' relevant issues (external significance) were, instead, identified by combining an analysis of stakeholders' requests submitted to Eni during the 2010 with the periodic coverage of issues found in the questionnaires prepared by rating agencies (SAM, Vigeo, Eiris and Goldman Sachs). The materiality is determined through the intersection of internal and external significance.

Climate Strategy	<b>cs</b>	Risk & Crisis Management	<b>rcm</b>
